Experiment 6.1.1

Algorithm

1. Start
2. Input day, month, year
3. If year ≤ 0 → print **Invalid Date**, stop
4. If month < 1 or month > 12 → print **Invalid Date**, stop
5. Determine max_days in month (use leap year for February)
6. If day < 1 or day > max_days → print **Invalid Date**, stop
7. Increment day by 1
8. If day > max_days → set day = 1, month++
9. If month > 12 → set month = 1, year++
10. Print date in DD-MM-YYYY format
11. End

Flowchart

Experiment 6.1.2

Algorithm

1. Start
2. Input `n`
3. Set `factorial = 1`
4. For `i` from 1 to `n` `factorial = factorial × i`
5. Print `factorial`
6. End
